Investment Data Intelligence Report

EXECUTIVE SUMMARY

This dataset contains 5542 records and 6 columns.

The dataset is 100.0% complete.

Data quality score is 4.36/100.

The average investment amount is Rs.375,027.07.

Immediate action is recommended to improve overall data quality.

=====

KPI DASHBOARD

Total Records : 5542

Missing Values : 1

Duplicate Rows : 5300

Data Completeness : 100.0%

Quality Score : 4.36/100

Dataset Health : Critical

Risk Level : Very High

Executive Assessment

The dataset currently contains 5300 duplicate records.

Data completeness is 100.0%.

Overall health status is Critical with a Very High risk profile.

Management attention is recommended before using this dataset for strategic decision-making.

Dataset Summary

Total Records: 5542

Total Columns: 6

Average Investment: 375027.07

Highest Investment: 810000

Lowest Investment: 150000

Rows: 5542

Columns: 6

Missing Values: 1

Data Quality Report

Duplicate Rows: 5300

Data Completeness: 100.0%

Quality Score : 4.36/100

Risk Level : Very High

Dataset Health: Critical

Column Names:

- Investor Name
- PAN Number
- City
- Investment Type
- Investment Amount
- Annual Return %

Dataset Statistics

Investment Amount

Mean: 375027.07

Max: 20.4

KEY FINDINGS

- 1. Dataset contains 5542 records.
- 2. Data completeness is 100.0%.
- 3. Duplicate records found: 5300.
- 4. Average investment amount is Rs.375,027.07.
- 5. Dataset health status is Critical.

Business Impact

- 1. The presence of 5300 duplicate records can affect reporting accuracy.
- 2. Improving data quality can increase confidence in business decisions.
- 3. The current quality score of 4.36/100 suggests immediate attention is required.
- 4. The average investment amount of Rs.375,027.07 indicates significant financial activity that requires accurate data for analysis.

AI Recommendations

- HIGH PRIORITY: Remove 5300 duplicate records to improve reporting accuracy and decision-making reliability.
- HIGH PRIORITY: Perform data cleansing and validation to improve overall dataset quality.
- MEDIUM PRIORITY: Analyze top-performing investment categories and optimize portfolio allocation.
- POSITIVE: Dataset completeness is excellent and suitable for advanced business analysis.

AI Business Insights

The dataset contains 5542 investment records with a completeness level of 100.0%.

A total of 5300 duplicate records were identified, which may affect reporting accuracy and business decision-making.

The average investment amount is Rs.375,027.07, indicating the overall scale of investment activity.

Current data quality score is 4.36/100 and the dataset health status is classified as Critical.

Strategic Recommendation:

Organizations should prioritize data quality improvements before relying on this dataset for critical business decisions.

Risk Assessment:

Current risk level is HIGH due to the large number of duplicate records.

Expected Outcome:

Removing duplicates and validating data quality can significantly improve reporting accuracy and decision-making confidence.

Data Cleaning Audit

Duplicates Found: 5300

Duplicates Removed: 5300

Missing Values Found: 1

Missing Values Fixed: 1

Remaining Missing Values: 0

Dataset was automatically cleaned by removing duplicate records and fixing missing values.
